Sustainability Manager

going the extra mile

Isn't it sometimes like the Aftermarket is living under a shadow? Expected to follow, not to lead. To copy, not to create. To "meet OE quality," as if that were the ultimate ambition.

At Dinex, we've never quite understood that logic. As a trusted partner to global OEMs, we approach the Aftermarket with the same innovative, benchmark-breaking and agile mindset that our customers at the assembly lines know us for.

## OE or Aftermarket? It's All About Mindset

Back in 1982, all truck silencers were full-welded – until Dinex changed that. Our lock-seamed design raised the bar for durability and cost-efficiency, and it wasn't made for an OEM; it was made for the Aftermarket. That same mindset drives us today: Challenging conventions and developing smarter, more efficient solutions – no matter who the customer is.

From Euro 7 solutions to alternative fuels and hydrogen powertrains, and from advanced material technologies to continuously optimized Euro VI components, we keep pushing performance, durability, and cost-effectiveness forward. And every breakthrough we make is designed to benefit both OEMs and the Aftermarket – not only during development, but long after serial production begins.

## Turning OEM Experience into Aftermarket Advantage

Every OEM solution we develop adds to our understanding of design, materials, and performance – and those insights directly shape our Aftermarket range. From optimized Euro VI silencers and enhanced catalytic DOCs and DPFs to circular initiatives like our reconditioning program, we apply one mindset: Make it easier to service, more efficient to produce, stronger in the field – and supportive of a cleaner, greener future.

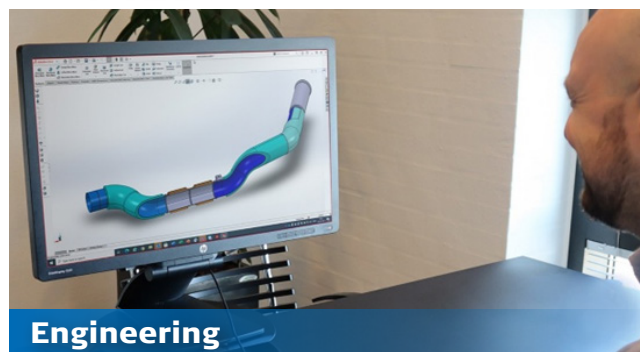

That's how Dinex turns OEM experience into everyday Aftermarket value.

## Making Great Technology Greater – and More Sustainable

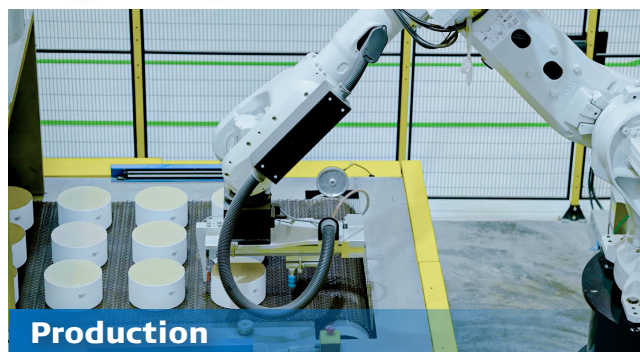

Whether it's at the OEM design table or in the Aftermarket workshop, our ambition stays the same: To challenge benchmarks and push performance, durability and circularity further. Innovation doesn't belong to one side of the industry – it belongs to those who dare to lead it. And that's where you'll find Dinex.
